

Chanon Aupattanapanit

Data Analyst

Bangkok, Thailand · 085 551 9173 · chanon.aupattanapanit@gmail.com · linkedin.com/in/chanon-a · nothingtaro.github.io/data-website

SUMMARY

Data Analyst with a Statistics foundation (First-Class Honours, Chulalongkorn University) and full-time experience across banking and e-commerce. Fluent in SQL, Python, and BigQuery, with hands-on experience in customer segmentation, funnel analysis, dashboards, and process automation. Currently building customer-segmentation models and supporting Voice and Agentic AI for QC operations at Krungsri.

SKILLS

Languages & Query	SQL, Python, R
Data & Cloud	Google BigQuery, Google Cloud Platform, PySpark, data warehousing
Analytics & ML	Customer segmentation, funnel analysis, A/B testing, Bayesian inference, machine learning, deep learning, reinforcement learning
Visualization	Tableau, Power BI, Looker Studio
Practices	Requirements gathering, process automation, experimentation, stakeholder communication

EXPERIENCE

Data Analyst, Krungsri (Bank of Ayudhya) May 2025 – Present
DDO Innovation · Data Science & AI · Bangkok, Thailand

- Build renewal-campaign customer segmentation to guide personalized customer communication.
- Analyze in-app funnels to locate user drop-off points and inform product and campaign decisions.
- Support Voice and Agentic AI initiatives applied to quality-control (QC) operations.

Business Intelligence & Seller Experience, Shopee Thailand Nov 2023 – Apr 2025
BD Infrastructure · Bangkok, Thailand

- Developed Python-based payment-operations automation that reduced prepaid-campaign task volume by 70%.
- Gathered technical and business requirements from stakeholders to prioritize process improvements.
- Surfaced seller pain points through sentiment analysis to inform seller-experience improvements.

Data Scientist Intern, TMBThanachart Bank (ttb) Jun 2023 – Aug 2023
ttb Analytics · Bangkok, Thailand

- Applied reinforcement learning to enhance the DELPHI algorithm behind personalized card recommendations in the ttb app, roughly doubling efficiency over the baseline method.
- Used SQL and Python to analyze customer card-usage patterns and simulate user interactions during algorithm testing.

PROJECTS

Thai Food Image Classification · Senior Project 2023

- Benchmarked four CNN architectures (VGG16, ResNet50, InceptionV3, Xception) with transfer learning; the fine-tuned Xception model reached 93.06% accuracy (93.02% F1) across 12 Thai dishes. Python, TensorFlow/Keras.

Dynamic Vehicle Routing · EURO Meets NeurIPS 2022 Competition 2022

- Designed and compared five dispatch strategies for the vehicle routing problem with time windows (VRPTW) on a Hybrid Genetic Search solver; placed 26th of 54 teams in the dynamic setting. Python, operations research, logistic regression. (Team of 5.)

EDUCATION

B.Sc. in Statistics, Chulalongkorn University 2019 – 2023

- GPAX 3.76, First-Class Honours.
- Coursework: Statistical Analysis & Theory, Machine Learning, Deep Learning, Data Visualization, Data Warehousing & BI, Database Applications.

CERTIFICATIONS

- Hands-On Power BI, Skooldio (2023)
- Web Scraping Fundamentals with Python, Skooldio (2023)
- Introduction to Deep Learning in Python, DataCamp (2022)
- Data Manipulation with Python, DataCamp (2022)
- Supervised Learning with scikit-learn, DataCamp (2022)
- SQL & Advanced SQL for Data Analytics, Skooldio (2021)
